

THE CLUB OPERATING SYSTEM

Built by coaches. Proven in a real club. Ready for yours.

Scheduling, player development, messaging, and payments in one system, running a real training business every week, not a demo built to look good in a meeting.

OUR STORY

Built to solve one club's real problem first.

ClubHQ started as a private tool for one business: **Williams Soccer Clinic**, a youth soccer training business founded by twin brothers Samaan and Samir Williams, running sessions across three Atlanta-area locations: Dunwoody, Snellville, and Stone Mountain.

Spreadsheets, group texts, and generic scheduling apps could handle a calendar. None of them understood what a coach actually does day to day: evaluate a player, track

their development, assign real homework, and follow up on it weeks later. So the brothers built the system they wished existed, for their own business first.

We didn't research a market and guess what clubs might want. We ran a club on it ourselves, every week, until it actually worked.

Once it was carrying the full weight of a real, paying training business, three locations, real families, real coaches, it stopped being an internal tool and became a platform other clubs and private trainers could run on too.

WHY CLUBHQ

Everything a club actually needs, in one place.

Most club software handles a calendar and stops there. ClubHQ was built around the full coaching workflow, the parts that actually determine whether players improve and parents stay engaged.

01

Real scheduling

Club-wide, one team, or a hand-picked group of specific players. A private session with two kids from different age groups is a normal case, not a workaround.

03

Payments, without a processor

Lightweight paid or unpaid tracking per player per month, visible to staff and to the parent actually being asked to pay.

02

Coach-led development

Skill evaluations become development plans and real homework, tied to a vetted drill video library, including drills a coach films right in the app.

04

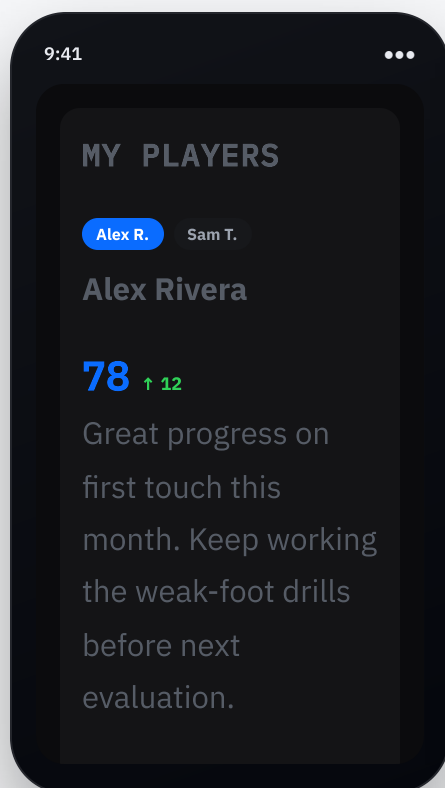

Built for real families

Multiple kids in one household switch with a tap. Search finds an old message instead of endless scrolling. Notifications can be tuned, not all or nothing.

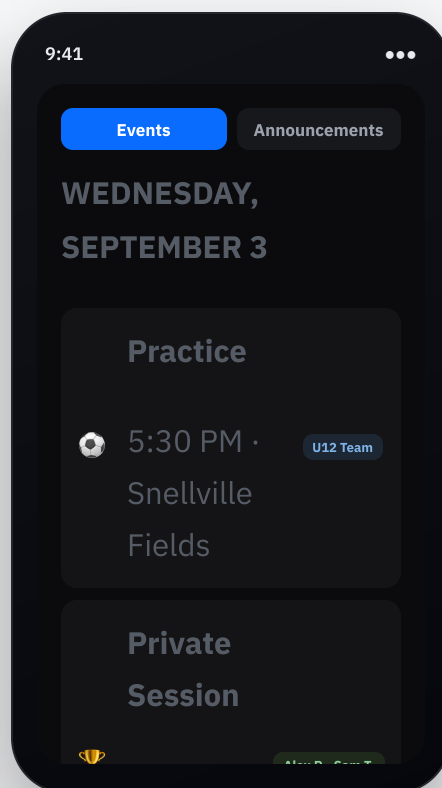

INSIDE THE APP

What your coaches and parents actually see.

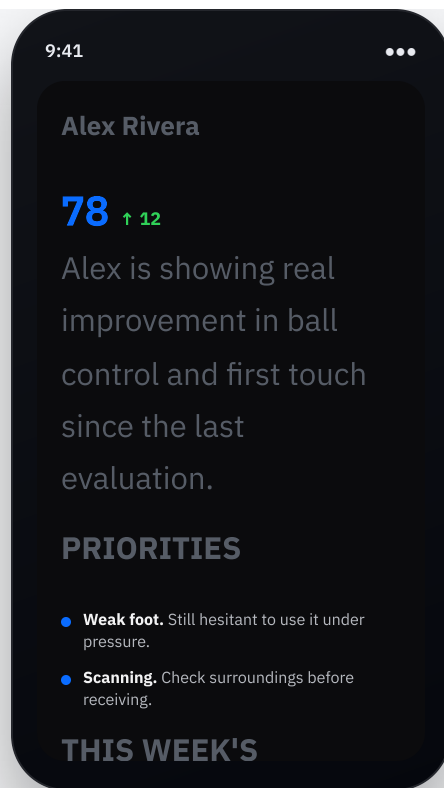

Mocked up from the real screens in the app, not concept art. Sample data shown, no real family's information.

Player Development

AI, HANDLED RESPONSIBLY

A PLAYER'S REAL NAME NEVER REACHES THE AI

AI helps write the plan. It never learns who your players are.

ClubHQ uses AI in three places: turning a coach's evaluation into a draft development plan, powering a director's data assistant, and transcribing a coach's spoken voice notes into structured player updates. In every one of those, the actual child's name is stripped out before anything is sent, and only put back afterward, on ClubHQ's own server, never inside the request to the AI itself.

WHAT A COACH SEES

Jordan Smith

WHAT THE AI SEES

Player_7

- ✓ **No full name, ever.** Not a first name, not a last name, not even an initial reaches the AI in any feature, including spoken voice notes.
- ✓ **A coach reviews every plan first.** An AI-drafted development plan sits as a draft until a coach reads and publishes it. Nothing AI-generated reaches a parent unsupervised.
- ✓ **Homework is never invented.** It's pulled from the club's own vetted drill library, or left blank rather than guessed.
- ✓ **The anonymization happens automatically,** not as an opt-in setting a director has to remember to turn on.

**This is the exact system
running a real club today.**

See what it could run for yours.
